

# Problem set 11

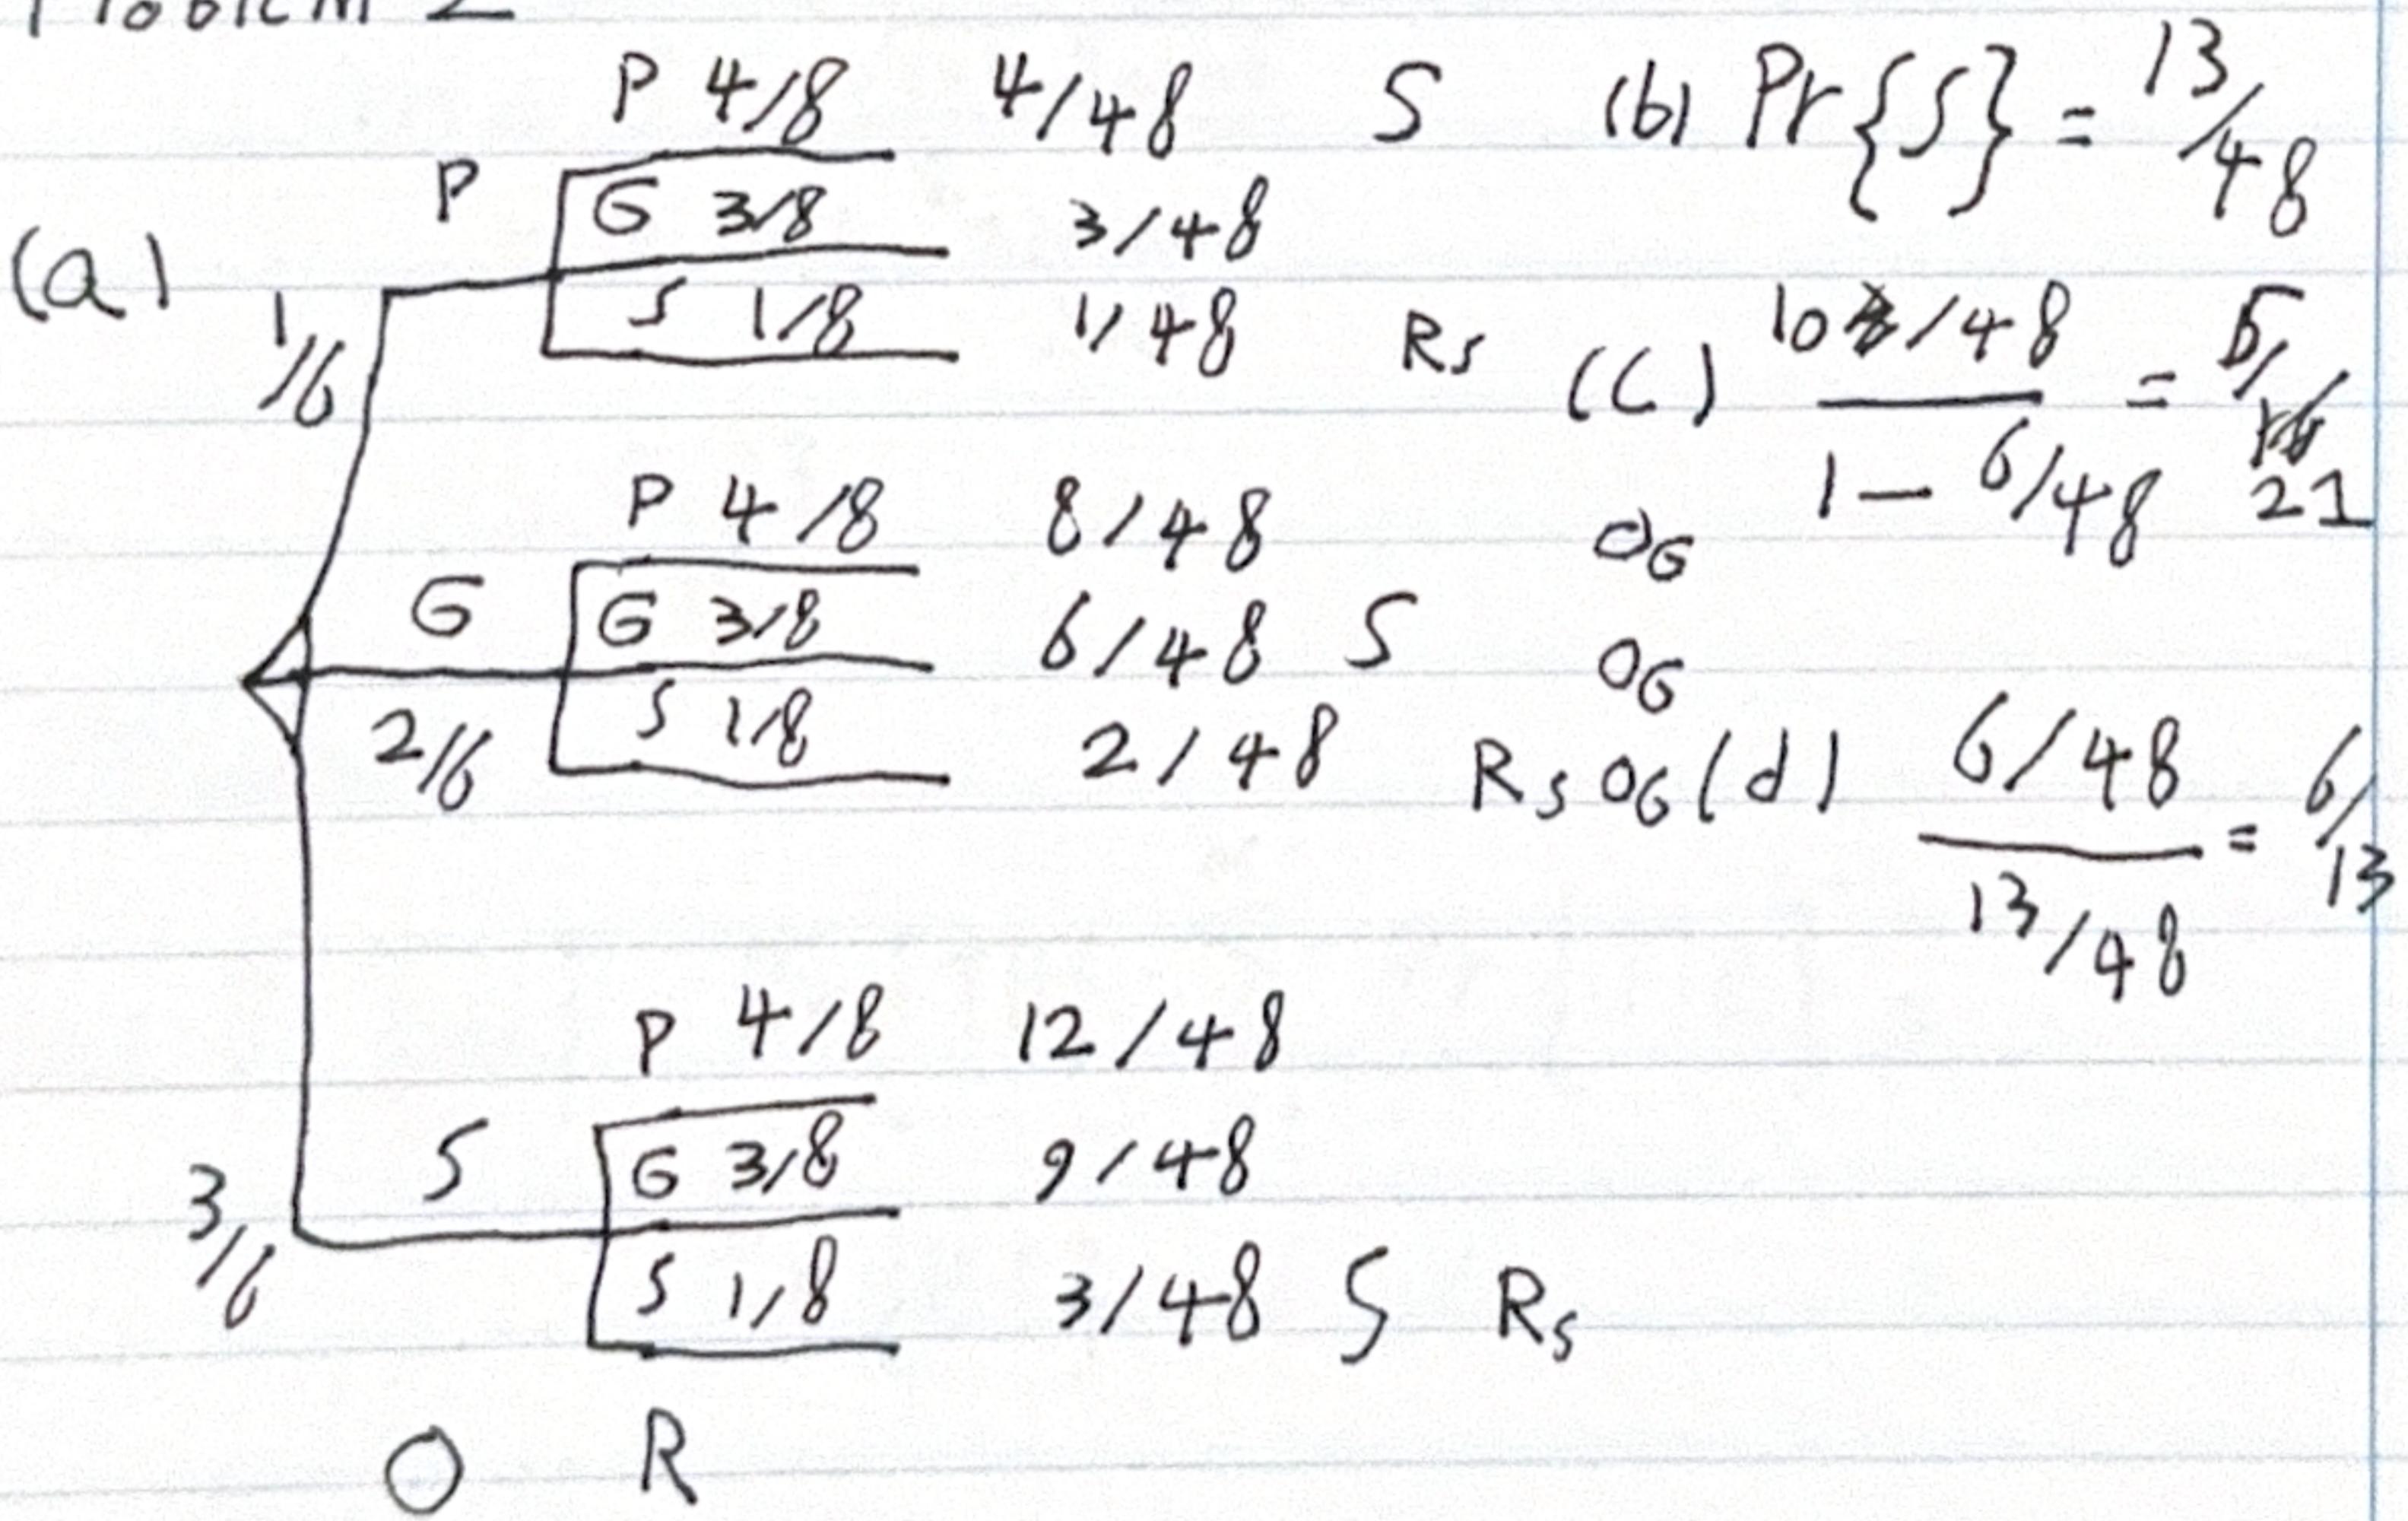

## Problem 1

(a)  $\begin{array}{c} T \quad O \\ \hline GGO \quad GGO \\ GGY \quad GGY \\ GBO \\ BGY \end{array}$

$$(b) \Pr(T|O) = \frac{2/8}{4/8} = \frac{1}{2}$$

$$(c) O \neq \text{KG}$$

## Problem 2

### Problem 3

$$(a) \frac{N!}{(N-m)! N^K} \binom{N}{m}^{K-m} = \frac{N!}{(N-m)! N^m} \left(1 - \left(\frac{m}{N}\right)^{K-m}\right)$$
$$= e^{-\frac{m^2}{2N}} - \frac{m}{N}(K-m)$$

$$(b) -\frac{m^2}{2N} - \frac{mK - m^2}{N} = -\ln(2)$$

$$-m^2 - 2mK + 2m^2 = -2N \ln(2)$$

$$m^2 - 2mK + 2N \ln(2) = 0$$

$$m = \frac{2K - \sqrt{4K^2 - 8N \ln 2}}{2}$$

$$= K - K \left(1 - \frac{2N \ln 2}{2K^2}\right)$$

$$= \frac{N \ln 2}{K}$$

### Problem 4

$$(a) \Pr\{W\} = \Pr\{\text{TH}\} \cdot \sum_{i=0}^N \Pr\{\text{Tie}\}^i =$$

$$\Pr\{\text{HT}\} \cdot \dots =$$

$$\Pr\{L\}$$

$$(b) \left( P^2 + (1-P)^2 \right)^N$$

Problem 5

$$(a) P(A|B) \neq 0 \neq P(A)$$
$$P(B|A) = 0 \neq P(B)$$

$$(b) P(A \cap \bar{B}) = Pr(A) - Pr(A)Pr(B)$$
$$= Pr(A)(1-Pr(B))$$

(c)

A ::= 1st flip is heads

B ::= 2nd flip is heads

C ::= odd heads

$$\frac{Pr(A \cap (B \cup C))}{Pr(B \cup C)} = \frac{\cancel{Pr(HH, HT)}}{Pr(HH, TH, HT)} = \frac{2}{3} \neq \frac{1}{2} = Pr(A)$$

$$(d) Pr(A \cup B|C) = Pr(A|C) + Pr(B|C) - Pr(A \cap B|C)$$
$$= Pr(A) + Pr(B) - Pr(A \cap B)$$
$$= Pr(A \cup B)$$

## Problem 6

(a) mult. Indep

(b)  $\frac{1}{15,000/1000}$ . No.

(c)  $\frac{1}{5000}$

(d) The researcher didn't do  $Pr(C | A \cap B)$ ,  
meaning B & C may not be indep given A.
